

# 3 Air Conditioning Service Plans for Your Savings and Comfort

## Air Conditioning Annual Tune-Up

A worthwhile investment you can make in your home is an annual tune-up, which is included in all three Dominick Fuel, Inc. air conditioning service plans. A qualified specialist will scrutinize your air conditioning system every year, looking for – and correcting – potential problems before they occur. An annual tune-up includes:

- 13-point annual tune-up to keep your A/C system running at peak efficiency
  - Maintenance will be performed once a year between May 1 and September 1
1. Lubricate & check all moving parts, including bearings, blower motor, condenser fan (and adjust belt, if applicable).
  2. Evaluate condition of air filters; replace with standard disposable fiberglass filters.
  3. Check evaporator coil.
  4. Check refrigerant charge; additional refrigerant requires an extra charge plus labor.
  5. Test “temperature drop” at return and supply air.
  6. Install gauges and check operating pressures.
  7. Check condensate to make sure draining at the time of visit to help protect against overflow.
  8. Tighten and safety test all wires and connections.
  9. Check controls for proper operation.
  10. Test operation and condition of compressor contacts.
  11. Inspect, start and run capacitors and inspect relays for bulges, rust and leaks.
  12. Check outdoor condenser coil.
  13. Inform customer of equipment condition. Recommend repairs when necessary.

All service work will be performed Monday – Friday, 8:00 a.m. to 4:30 p.m.

## 1 Air Conditioning Service Plan

- Includes an Annual Tune-Up plus the significant addition of the major items listed below\*
- Provides maximum protection and peace of mind
- Coverage of 18 valuable parts and services!†
- Includes 10% labor discount for any service not covered under this plan

The parts and services listed below are included:\*\*

- |  |                                 |
|--|---------------------------------|
| ◆ Blower Motor (up to \$350 allowance)         | ◆ High Pressure Switch          |
| ◆ Blower Pulley                                | ◆ Low Pressure Switch           |
| ◆ Blower Wheel                                 | ◆ Potential Relay               |
| ◆ Condensate Pump                              | ◆ Running Capacitors            |
| ◆ Condenser Fan                                | ◆ Starting Capacitors           |
| ◆ Condenser Motor                              | ◆ Starting Relay                |
| ◆ Condenser Relay                              | ◆ Thermostat (Non-programmable) |
| ◆ Contactors                                   | ◆ Time Delay Control            |
| ◆ Fan Timer Board (up to \$150 part allowance) | ◆ Transformers                  |

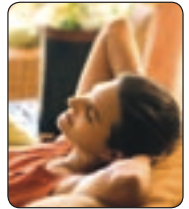

\* Dominick Fuel must perform a pre-season tune-up before you can purchase this plan. Customer is responsible for arranging a tune-up appointment between May 1 and Sept. 1. The tune-up cost will be deducted from the price of this plan. If we find things wrong with your system, they must be fixed prior to your purchase of this plan, and you will be charged our prevailing rates to repair or correct any problems found.

\*\* Refrigerant and refrigerant side of system not included.

**Loyalty Credits**<sup>††</sup> You will earn a **\$50 credit** every year you purchase an air conditioning service plan or one of our combo air conditioning add-on plans from us (maximum value \$500). These loyalty credits can be used towards the purchase of **new cooling equipment** (see chart below listing the allowable credits per item).

## 2 Combo Air Conditioning/ Hydro-Air Add-On Plan

Hydro air technology combines the best of hot water and hot air heating. Heat is generated by a boiler but distributed as heated air. The heated water is piped through an air handler, where the heat is transferred from hot water coils to the air, which is then distributed to rooms through ductwork. If a central air conditioning system is integrated, the ducts perform double duty for heating in the winter and cooling in the summer. Dominick Fuel’s Combo Air Conditioning/Hydro-Air Add-On Plan covers all the parts listed under the Air Conditioning Service Plan plus labor for this type of system.†

## 3 Combo Air Conditioning/ Furnace Add-On Plan

This add-on plan includes a comprehensive maintenance check for both your oil-fired furnace and air conditioner when combined with a primary heating plan or extended protection heating plan, plus one year’s protection from costly furnace or A/C repairs. Dominick Fuel’s Combo Air Conditioning/Furnace Add-On Plan covers all the parts listed under the Air Conditioning Service Plan plus labor for this type of system.†

† No emergency service will be covered on air handler or A/C unit in the summer. In the winter, emergency service will be performed after hours on hydro-air air handlers for customers who have a Dominick Fuel Heating Plan and are on Automatic Delivery. After hour labor charges will apply.

Credits are not transferable and have value only toward purchases of the following equipment from Dominick Fuel.

- Air Conditioning Condenser ..... \$200
- Central Air Conditioning System ..... \$500

†† Not to be combined with Heating Plan Loyalty Credits.

**Air Conditioning Plans include a 10% discount on repairs performed by Dominick Fuel, Inc. on your covered Air Conditioning system!**
